

## Here are a few tips and tricks to properly use the Sew Easy tool:

- It is recommended to practice on scrap paper to get the feel, before using on a project.
- Grip the handle with the pointer finger extended. (Use the pointer finger to steady the tool as it rolls along the paper).
- Apply a firm, steady pressure with the pointer finger, not the palm.
- Roll the tool forward along the project at a slow to medium pace.
- Keep the tool piercing head level with the mat as it rolls.
- If tool is tilted too far left or right the roller head will score the paper.
- If for some reason a hole does not pierce completely, simply use the free needle to finish the piercing. This may happen on thicker paper or multiple sheets.
- Ideal for use on 1 sheet of 175 gsm or 80 pound cover paper.
- When used properly the Sew Easy tool creates small, perfectly aligned holes for a clean stitched look.

## Changing the Sew Easy Heads:

- To insert a head, line up the three knobs, insert neck into hole, push down, and rotate counter clockwise.
- To remove a head, rotate clockwise, then pull out.
